

Blinkit Reginal Sales Analysis

Project Insights

1. Sales by Item

Fruit & Vegetables and Snack Foods are the leading items driving the **most sales**

Inferences :- Fruits & Vegetables are staples used in every household. and Snack Foods could be the result of Impulse buying a further study is required to draw a conclusion

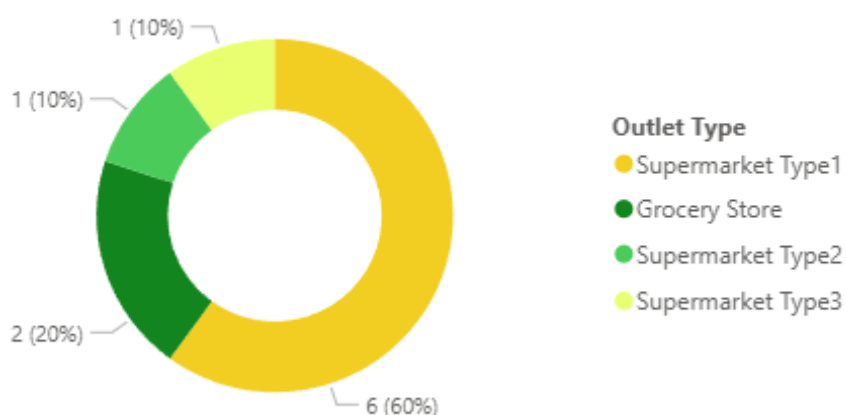

2. Individual outlet's Performance

Outlet Type	Total Sales	AVG Sales	Items Count	Rating	Visibility
Grocery Store	1,51,939.15	140.29	1083	3.93	0.10
Supermarket Type1	7,87,549.89	141.21	5577	3.92	0.06
Supermarket Type2	1,31,477.78	141.68	928	3.93	0.06
Supermarket Type3	1,30,714.67	139.80	935	3.91	0.06
Total	12,01,681.49	140.99	8523	3.92	0.07

Supermarket Type1 generates the maximum sales, but it can not be because individual items are better than other. In fact, the Average sales for the Supermarket Type 1 is similar to other outlet type with difference only being a small margin.

The Reason for better performance is because of higher number of outlet in total as shown in the figure below

Count of Outlet by Outlet Type

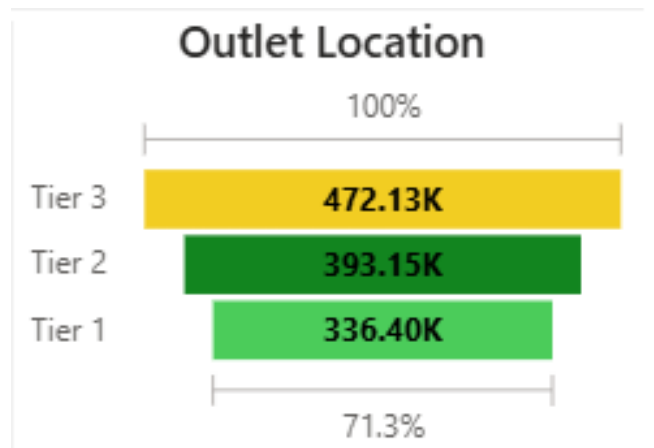

Supermarket type1 outlet has a total of 6 outlet which is 300% more than the second most total number of outlet i.e. Grocery Store.

Inference -

- The Supermarket Type2 outlet has achieved the highest Average sales despite dealing with the least item trade count.

- Despite producing a small fraction of overall revenue, Grocery Store achieve an identical average sales footprint with almost double the visibility (0.10) out of other outlet which is (0.6)

3. Location wise outlet comparison

Outlet in Tier 3 has generate the highest cumulative sales volume overall

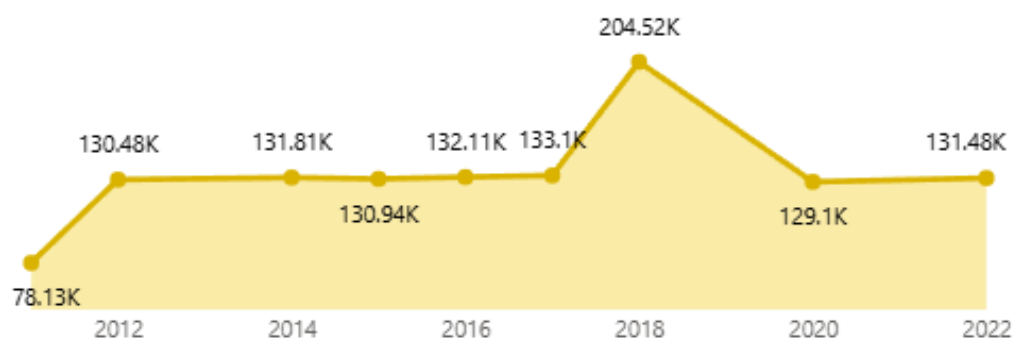

The Reason can be most probably because of diversification in outlet types in Tier 3 locations.

Outlet Type	Tier 1	Tier 2	Tier 3	Total
Grocery Store	1		1	2
Supermarket Type1	2	3	1	6
Supermarket Type2			1	1
Supermarket Type3			1	1
Total	3	3	4	10

Assumption:- Diversifying the types of outlet in a geographical location can enable the firm to target a highly diversified regional demographic segments.

Or, The Reason for high cumulation of sales could be because of present of the most number of outlet in a geographical location. A further study is required to **draw out an inference or conclusion**

4. Outlet Contribution in initial year of establishment

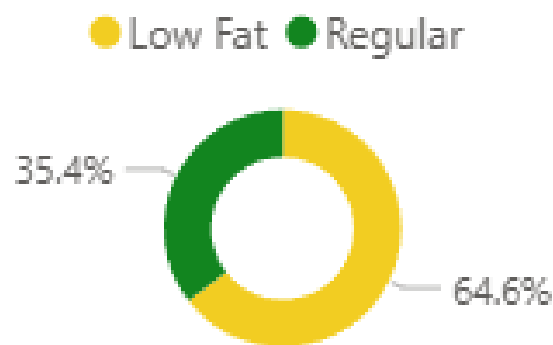

The ear 2018 observed the highest sales with an increase of nearly **30%** compared to previous year 2017. While in the upcoming ear 2020 a **dip** of about **46.25%**.

The Reason :- In the year 2018, 2 outlet was established while in the other years of establishment only 1 outlet where established.

This Abnormality was because of cumulative contribution of two outlet compared to the contribution of one outlet. It can be easily understood by following Visual –

Outlet Establishment Year	Count of Outlet Identifier
2011	1
2012	1
2014	1
2015	1
2016	1
2017	1
2018	2
2020	1
2022	1
Total	10

5. Revenue Shared by Fat Content

The donut charts reveals that Low Fat products are highly preferred by the customers. The massive variance in the fat Content can be derived **because of Fruits & Vegetables** which is an essential household commodity, is contributing the most towards the revenue stream.
